General Description

Formula 630, Display Pen with integrated optical reader, is a lightweight and versatile Pen Terminal ideal for those data collection activities where size, weight and cost requirements are the determining factors.

It is are designed to suit many applications such as stock control, warehousing, document control, retail sale, opinion polls, market research and even waiter service.

The **Formula 630** Display Pen is able to read all bar code symbologies used in industry and commerce today, under any ambient light conditions, from direct sunlight to total darkness and they are protected against dust, water jettings and electrostatic discharges.

Available with a pre-loaded application, it offers 128KB of data memory and features a LCD graphic display with software controlled icons and two scroll keys for memory query, allowing easy and productive dialogue between user and pen terminal itself.

The instant they are captured, codes are automatically discriminated, decoded and sequenced according to a preset order, matched to a quantity, time and date, and stored permanently till you decide to download them to the host computer for later and further processing.

Data transfer takes place via RS-232 or RS-485 serial connection by simply inserting the terminal into the *Formula 951* Optical Transceiver/Charger.

Furthermore, by using the *Development System 630*, the **Formula 630** is completely programmable in C language, allowing the user to perform an easy modelling of the terminal's functions to create all the programs to meet specific individual, business or company needs.
